

Computer Repair Report

P.C.I.D.: TM52726

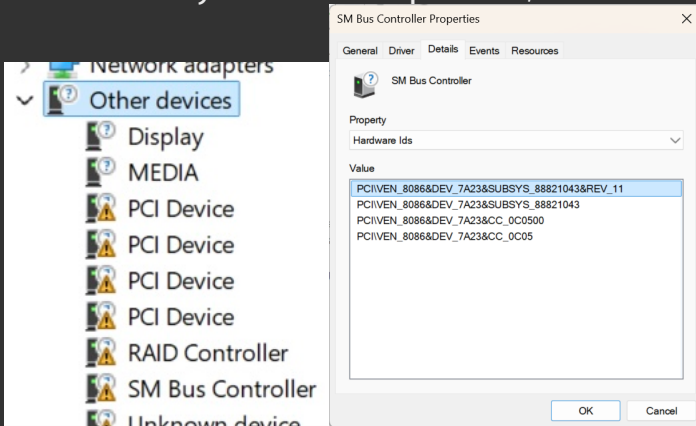

Model: Custom

Client Reported Issue:

Client stated the computer ran laggy and no sound after doing Windows updates.

Root Caused Analysis:

Updates 2026-05 Preview Update (KB5089573) (26200.8524), 2026-05 NET Framework Preview Update (KB5092427), and 2026-02 Critical Update (KB5078674) were installed successfully. After the updates, 9 devices were without drivers.

After identifying all missing device, I downloaded all missing latest drivers and installed them. This resolves the audio issue and performance issue.

Diagnostics Performed:

Action: Installed all missing drivers

Results: Installed correctly. All devices are working properly.

Notes: Video Card, Chipsets, and SerialIO had missing drivers. Video card was passing the audio through the HDMI cable. This is why the client had no sound.

Action: Performed System File Check

Results: 0 files were corrupted.

Notes: Windows integrity not compromised.

Action: Virus, Malware, etc scans

Results: No threats detected.

Notes: System clean and no quarantine files.

Action: O/S Hardening

Results: All Apps and O/S is fully updated.

Notes: Windows Updates, MS Store Updates, & Terminal: Winget upgrades

Action: Dust Removal

Results: PC internal systems cleaned.

Notes: removed buildup layers of dust inside the PC.

Repair Outcome:

After installing all missing drivers, the computer returned back to normal operations.
Client was pleased with the results.
